Word press
by
TOPS TECHNOLOGY

Resource Person: Mr. Brijesh
Date: 15th March, 2018
Timings: 12:00 PM to 02:00 PM

Everything today revolves around technology. From simple things like watches and cars to complicated infrastructure networks, everything can be connected to the Internet and become a gadget. Since it is such an important aspect of our life, people need to stay updated regarding the newest and hottest topics in technology. The regular tech news reader will know how a reliable site should look. This is not the place where you can make it with a poor design and slow loading site.

The information of today is interactive and engaging. That's also how your website should be. If you want to create a fan base and keep your visitors interested in the news you deliver, it also needs to offer a perfect user experience. Since technology is the main topic of your site, you must give the impression that you're tech savvy.

The good news is that you don't need to be an experienced web developer in order to run an exemplary site. The only things required by a perfect tech news site are some basic knowledge of Word Press and a killer theme.

As a part of this CE/IT department arranged workshop on 15th March, 2018 by TOPS Technology is one of the largest IT Training, Outsourcing and Placement Service provider company. They gives the valuable practical knowledge to the more than 100 degree and diploma students of CE/IT department about web designing and makes student aware about what would be the role of word press in web designing.
