

Report on HACKTRACK-2018
State level workshop on Cyber Security
22nd September, 2018

INTRODUCTION

With reference to being a leading educational institute of Gujarat. We believe to run institute with industry exposure. Whatever we teach to our students as per syllabus, we just want show it practically. This event is the eminent example for the same.

Cyber security is the body of technologies, processes, and practices designed to protect networks, computers, and data from attack, damage, and unauthorized access. Cyber security training teaches professionals to spot vulnerabilities, fend off attacks, and immediately respond to emergencies.

Ensuring cyber security requires coordinated efforts throughout an information system. Elements of cyber security include:

- Application security
- Information security
- Network security
- Disaster recovery / business continuity planning
- Operational security
- End-user education
